1. Getting Started & Signing In

Henil Enterprise is a web application — there is nothing to install. Open the link your administrator gave you in any modern browser (Chrome, Safari, Edge, or Firefox) on a computer, tablet, or phone.

Signing in

- 1 Go to the application's web address. You'll land on the **Sign in** screen.
- 2 Enter the email address and password your administrator set up for you.
- 3 Select **Sign in**.

Don't have an account yet?

There is no public sign-up page. Accounts are created by an administrator from the Supabase dashboard. Ask your administrator to create one for you and tell you your role (see the next section).

Signing out

Select your name/email in the top-right corner of any page, then choose **Sign out**. You'll be returned to the sign-in screen, and trying to open any page directly afterward will send you back to sign in first.

Using it on your phone

The app is fully usable on a phone or tablet. On narrow screens, the left-hand menu is replaced by a menu button (☰) in the top-left corner — tap it to open the navigation, tap a section to go there, and it closes automatically.

2. Understanding Your Role

What you can see and do depends on the role your administrator assigned you. This isn't just about hiding menu buttons — the system enforces it at the database level, so you'll only ever see data you're actually permitted to see.

ROLE	CAN ACCESS
Admin	Everything, including Company Settings and managing other users.
Manager	Clients, Products, Quotations, Invoices, Inventory, Reports.
Sales	Clients, Products, Quotations.
Accounts	Invoices, Payments, Finance, Expenses, Reports.
Staff	Inventory, plus any other modules specifically assigned to you.

Don't see a menu item you expect?

That's expected behavior for your role, not a bug. If you believe you should have access to something, ask an administrator — they can grant additional access from your user profile.

3. The Dashboard

The Dashboard is the first thing you see after signing in. It gives you an at-a-glance summary of the business: recent quotations and invoices, outstanding payments, low-stock items, and key financial totals — all pulled live from your real data, not a static snapshot.

Use the sidebar (or the ☰ menu on mobile) to move to any section from here. Every page also shows a breadcrumb trail near the top (e.g. *Home > Quotations*) so you always know where you are.

4. Clients

The Clients section holds every customer company you do business with — their contact details, GST number, and address. You'll pick a client whenever you create a quotation or invoice.

Adding a client

- 1 Go to **Clients** in the menu, then select **Add client**.
- 2 Fill in the company name (required) and any contact details you have — phone, email, GST number, address.
- 3 Select **Add client** to save.

Finding a client

Use the search box to find a client by company name, contact person, email, phone, or GST number. You can also filter by state and sort the list.

Editing or removing a client

Open the  menu on any client's row for **Edit** or **Delete**. Select a client's name to open their detail page, which also shows their quotations, invoices, payments, and any uploaded files in one place.

Tip

You don't need every field filled in to save a client — only the company name is required. Add the rest as you learn it.

5. Products

Products are the materials and items you sell — acrylic sheets, polycarbonate panels, custom fabrication jobs, and so on. Each product has a default rate and GST percentage, which pre-fill automatically whenever you add it to a quotation or invoice (you can always adjust the rate for a specific job).

Adding a product

- 1 Go to **Products**, then select **Add product**.
- 2 Enter the product name and a unique SKU (a short code you use to identify it).
- 3 Set the unit (e.g. sheets, pcs, kg), default rate, and GST percentage.
- 4 Optionally add a category, material, thickness, and description.
- 5 Select **Add product**.

Active vs. inactive

Instead of deleting a product you no longer sell, mark it **Inactive** from its row menu. Inactive products won't appear when picking items for a new quotation or invoice, but historical documents that already used them are unaffected.

6. Quotations

A quotation is an offer you send a client before any work is confirmed. Once they accept it, you can convert it directly into an invoice without re-entering anything.

Creating a quotation

- 1 Go to **Quotations**, then select **New quotation**.
- 2 Choose the client and a quotation date. "Valid until" is optional.
- 3 Add one or more line items: pick an existing product (its description, unit, rate, and GST% fill in automatically) or choose "Custom item" to type something one-off.
- 4 Adjust quantity and rate per line as needed. Select **Add item** for more lines.
- 5 Enter a discount amount if applicable — it's applied to the whole quotation, after GST.
- 6 Review the Subtotal, GST, and Total in the Summary panel — these update live as you type.
- 7 Select **Save quotation**.

The quotation number (e.g. `QT-00001`) is generated automatically and is always unique — you never need to set it yourself.

Generating the PDF

Open any saved quotation and use the **Document** section:

- **Preview PDF** — view it right in the browser before sending.
- **Download PDF** — save a copy to send by email or WhatsApp.
- **Print** — send it straight to a printer.

The PDF automatically uses your company's name, logo, address, and terms from Company Settings — you never need to re-type them.

Quotation status

STATUS	MEANING
DRAFT	Still being prepared, not yet sent to the client.
SENT	Sent to the client, awaiting their response.
VIEWED	The client has opened it (if you track this manually).
ACCEPTED	The client has agreed — you can now convert it to an invoice.
REJECTED	The client declined.

EXPIRED

Past its "valid until" date without a decision.

Change the status from the dropdown on the quotation's detail page.

Duplicating a quotation

Need to create something very similar to an existing quotation? Open it and select **Duplicate** — it creates a new draft with the same client, items, and discount, ready for you to adjust.

7. Invoices & Converting a Quotation

Converting an accepted quotation

- 1 Open the quotation and make sure its status is **Accepted**.
- 2 Select **Create invoice**.
- 3 The invoice form opens pre-filled with the same client and line items. Set a due date (required) and adjust anything if needed.
- 4 Select **Save invoice**.

The resulting invoice shows a banner linking back to the original quotation, so the connection is never lost.

Creating an invoice directly

You don't have to start from a quotation. Go to **Invoices** and select **New invoice** — the process is the same as a quotation (client, items, discount), plus a required due date.

Invoice status

STATUS	MEANING
DRAFT	Not yet sent.
SENT	Sent to the client.
PENDING	Awaiting payment, not yet due.
PARTIALLY PAID	Some payment received, balance still outstanding — set automatically.
PAID	Fully paid — set automatically the moment payments cover the total.
OVERDUE	Past its due date with a balance still outstanding.
CANCELLED	Voided — won't count in Finance totals.

You never set Partially Paid / Paid manually

These two statuses are calculated automatically the moment you record a payment — see the next section.

The invoice PDF

Exactly like quotations — **Preview**, **Download**, or **Print** from the invoice's Document section. The invoice PDF additionally shows what's been paid and what's still owed, plus your bank details (if you've added them in Settings) so the client knows how to pay you.

8. Payments

Record every payment a client makes against a specific invoice. The invoice's status and remaining balance update automatically — you never calculate this by hand.

Recording a payment

- 1 Open the invoice, or go to **Payments** and select **Record payment**.
- 2 Choose the invoice (if you didn't open it directly), enter the amount, date, and payment method (Cash, Bank Transfer, UPI, Cheque, or Other).
- 3 Add a reference number if you have one (e.g. a cheque or transaction number).
- 4 Select **Record payment**.

The system will not let you overpay an invoice

If you try to record more than the remaining balance, you'll get a clear error before anything is saved. This is checked both on screen and in the database, so it can never be bypassed.

Partial payments

You can record as many payments as needed against one invoice — for example, a 50% advance followed by the balance later. After each payment, the invoice shows exactly how much has been paid and how much remains.

9. Finance

The Finance page is your at-a-glance financial summary for a chosen date range. Every figure is calculated live from your real records — nothing here is entered by hand.

METRIC	WHAT IT MEANS
Total Sales	Sum of invoice totals in the period (excluding cancelled invoices).
Total Collected	Sum of payments actually received in the period.
Outstanding	What's still owed across all unpaid/partially-paid invoices, regardless of period.
Overdue	The portion of Outstanding that's already past its due date.
Expenses	Sum of expenses logged in the period.
Net Revenue	Total Collected minus Expenses — actual cash-basis profit for the period.

Use the date-range dropdown near the top to switch between this month, this quarter, this year, or a custom range.

10. Expenses

Track everything the business spends — materials, rent, utilities, salaries — so Finance can show you a true net revenue figure.

Adding an expense

- 1 Go to **Expenses**, then select **Add expense**.
- 2 Enter the date, category, description, and amount.
- 3 Choose the payment method and, optionally, the vendor and any notes.
- 4 Attach a receipt if you have a photo or PDF of it (optional).
- 5 Select **Add expense**.

Search, filter by category or date range, and sort the list just like Clients and Products.

11. Inventory

Inventory tracks how much stock of each product you actually have on hand, and keeps a permanent record of every single change — nothing is ever silently overwritten.

Setting opening stock

A product isn't "tracked" in Inventory until you set its starting quantity. On the Inventory page, any untracked product shows a **Set opening stock** button — use it once to begin tracking.

The five ways stock changes

TYPE	EFFECT	WHEN TO USE IT
Purchase	Increases stock	New material received from a supplier.
Return	Increases stock	Unused material returned to stock from a job.
Usage	Decreases stock	Material consumed in production.
Damage	Decreases stock	Material written off as damaged or unusable.
Adjustment	Increases <i>or</i> decreases stock	Correcting the recorded quantity after a physical stock count.

From any product's row, use the  menu for **Add stock** (Purchase/Return), **Remove stock** (Usage/Damage), or **Adjust stock**.

Stock can never go negative

If you try to remove more than is currently in stock, you'll get a clear error showing the actual current balance, and nothing will be saved.

Low stock warnings

Set a "reorder at" quantity for any product. Once stock falls to or below that level, it's flagged in red on the Inventory page and counted on the Dashboard, so you know to reorder before you run out.

Transaction history

Select **Transaction history** from the Inventory page to see a complete, permanent log of every stock change ever made — what changed, by how much, and when. This history is never edited or deleted; if a mistake was made, it's corrected with a new adjustment, not by rewriting the past.

12. Suppliers

Keep a record of the companies you buy raw materials and components from — the same kind of contact and GST details as Clients, just on the purchasing side.

- 1 Go to **Suppliers**, then select **Add supplier**.
- 2 Enter the company name and any contact/GST/address details you have.
- 3 Select **Add supplier**.

Search, filter by state, edit, and delete work the same way as every other list in the app.

13. Files & Drawings

Attach customer drawings and project files directly to a client, quotation, or invoice, so everything related to a job lives in one place.

Supported file types

PDF, PNG, JPG, JPEG, DXF, and DWG — up to 20 MB per file. Other file types are rejected for security, including any executable file.

Uploading

- 1 Open the client, quotation, or invoice you want to attach a file to.
- 2 Scroll to the **Files** section and select **Upload file**.
- 3 Choose the file — you'll see a real-time progress bar while it uploads.

Viewing and downloading

PDF and image files can be previewed right in the browser using the eye icon. DXF and DWG files can't be previewed in a browser (they need CAD software), but can always be downloaded. Use the download icon to save any file to your device.

Only Admins and Managers can delete files

Everyone with access to a client/quotation/invoice can upload and download its files, but deleting one requires a Manager or Admin role.

14. Reports

Generate real-time reports across every part of the business: Sales, Quotations, Invoices, Payments, Outstanding, Overdue, Expenses, and Inventory.

- 1 Go to **Reports** and choose a report type from the dropdown.
- 2 Set the filters relevant to that report — the available filters change depending on the report (for example, a Payments report lets you filter by method; an Inventory report lets you filter by category).
- 3 Select **Generate Report**.

Every report shows summary totals at the top, a breakdown table (e.g. by status, category, or client), and the full underlying list of records.

Exporting to CSV

Select **Export CSV** on any report to download the detailed records as a spreadsheet file you can open in Excel or Google Sheets for further analysis.

15. Company Settings

ADMIN ONLY

Configure everything that appears automatically on every quotation and invoice PDF, so you never have to type your company details more than once.

Company profile

- Company name, logo, address
- Phone, email, GST number, website

Terms & payment details

- Payment terms (shown on quotations)
- Quotation and invoice terms & conditions
- Bank details (shown on invoices, so clients know how to pay)

Document defaults

- Quotation and invoice number prefixes (e.g. `QT-` , `INV-`)
- Default GST percentage for new products and line items

Changing a prefix doesn't renumber existing documents

If you change the quotation prefix from `QT-` to something else, only quotations created *after* the change use the new prefix — existing numbers are never rewritten.

16. Tips, Troubleshooting & Support

General tips

- Most list pages (Clients, Products, Quotations, Invoices, Expenses...) support search, filtering, and sorting — use them to find things quickly rather than scrolling.
- Every form tells you exactly what's wrong, right next to the field, if something doesn't save — check for red text near the field you're editing.
- Nothing is deleted without a confirmation step, and the confirmation always names exactly what will be removed.
- The app works fully on mobile — use the ☰ menu to navigate on a small screen.

If a page shows an error instead of loading

You'll see a clear message (not a blank screen) with a **Try again** button. This usually means a temporary connection issue — select Try again, and if it persists, check your internet connection or contact your administrator.

If you can't access a page you expect to

You'll see a message explaining your role doesn't include that section. This is expected behavior, not a bug — see *Section 2: Understanding Your Role*. Ask an administrator if you believe you need access.

If a form won't submit

Look for red error text near the fields — every required field and format rule (like a valid email or a 15-character GST number) is checked before saving, and the exact problem is always shown next to the field.

Getting more help

For anything not covered in this guide, or to report an issue, contact your system administrator.
